Seasoned **Data Scientist** with applied experience in data processing, data mining, predictive modeling and visualization to solve complex business problems, I aspire to master all the components of machine learning products development and deployment workflows.

skills

Methods

- Supervised & unsupervised machine learning
tabular, time series. Deep learning for computer vision and NLP
- Simulation and optimization

Python frameworks & tools

- Pandas, numpy, SciPy
- Scikit-learn, Pytorch, XGBoost/LGBM
- Plotly, PowerBI, Matplotlib
- FastAPI, Streamlit, Dash

DevOps

- git (github & gitlab)
- Cloud computing notions (AWS/Azure)
- Docker

Database engineering

- PostgreSQL
- Microsoft SQL Server

personal projects

- Packaged ML model exposed with FastAPI
- Streamlit application to rebalance a portfolio
- Wide-Resnet from scratch in Pytorch to classify images
- 10 classical ML algos implemented in Numpy

languages

Français native 

English business fluent 

Spanish basic 

experience

Data Scientist / Data Projects Leader – Air Liquide

2019 → ongoing

Digital Factory | Paris, France

- Deliver Data Science projects from initial framing to delivery: **data engineering & analysis, development of optimization and machine learning models** in an agile mode
 - Implemented an **optimization model** to suggest H2 production policies on a network so to maximize CO2 allowances surplus under the ETS Phase 4 scheme of the European Commission
 - Built a **hierarchical forecast model** estimating the helium demand on the US market to improve raw product supply and dispatch. Packaged and supported **model deployment in Azure**
 - Produced a **methodology and simulation model** to estimate the impact of new revenue models on revenue streams in order to support the design of disruptive commercial offers while managing risk
 - Delivered an **end-to-end BI solution** for EU-wide monitoring of medical gases operations in **2 weeks** during the COVID crisis
- In charge of internal Data Science competitions federating a community of 300 data science enthusiasts within the company.

Data Analyst – Air Liquide

2017 → 2019

Large Industries | Frankfurt Am Main, Germany

- Developed and deployed an **end-to-end BI solution** to monitor industrial performance (>1000 users worldwide)
- Performed various **statistical exploratory data analysis**: advanced SQL queries, data mining, modeling and visualizations for business stakeholders
- Product Management** of an internal reporting solution (front & backend) with external developers for maintenance and feature development

Planning Engineer intern – Total E&P

april → august 2014

Moho Nord Project | Pointe-Noire, Republic of the Congo

- Developed a planification tool for offshore operations that automatically loads, visualizes and detects potential planning interferences to ensure smooth operations of subsea equipment installation

education

MSc. in Mechanical Engineering

2014 → 2016

Shanghai Jiao Tong University | Shanghai, China

Specialization in numerical analysis applied to fluid dynamics, heat transfer and solid mechanics

Master's degree in Engineering and Management

2012 → 2014

Ecole Centrale de Lille | Lille, France
